

THE AD HOC GROUP FOR MEDICAL RESEARCH

February 3, 2025

Dear Member of Congress:

As the 119th Congress begins, over 300 undersigned members of the Ad Hoc Group for Medical Research wish to welcome you. We invite you and your staff to consider this coalition as a valuable resource regarding our nation's premier medical research agency the National Institutes of Health (NIH), and its impact on improving the health of patients across the nation. The Ad Hoc Group for Medical Research, founded in 1982, is a coalition of patient and voluntary health groups, medical and scientific societies, academic and research organizations, and industry, dedicated to enhancing the federal investment in biomedical, behavioral, social, and population-based research supported by NIH.

Nearly every medication, diagnostic, and other intervention in practice today has its origins in NIH-funded research. Today, NIH investment takes place in every state and in nearly every [congressional district](#). NIH seeks to drive medical breakthroughs that will benefit patients nationwide, advance potential treatments and preventive strategies for cancer and Alzheimer's, improve maternal health, and develop countermeasures for persistent or emerging health threats. In 2024 alone, NIH research supported the development of a blood test that identified Alzheimer's disease correctly in older adults with nearly 90 percent accuracy. Such tests assist in speedier diagnoses and improve access to earlier treatments - saving lives. NIH-supported researchers developed a brain-computer interface that allowed a man to communicate after his ability to speak was impaired by amyotrophic lateral sclerosis (ALS). NIH-supported research also developed 3D maps of cancer which have provided critical information on how tumors develop, spread, and respond to treatments.

In addition to improving patients' health, a robust, reliable investment in scientific discovery is crucial to strengthening the economy in the near- and long-term and maintaining our nation's global dominance in medical discoveries. Through NIH, the federal government plays an irreplaceable role in supporting biomedical research that is inherently inefficient for industry to conduct but is essential to inform our fundamental understanding of medicine. More than 80 percent of the NIH's budget supports research in all 50 states and D.C., as well as U.S. territories, at medical schools, teaching hospitals, universities, and research institutes, which often are among the largest employers in their respective communities. In fiscal year (FY) 2023, federal support of medical research [directly and indirectly supported](#) over 400,000 jobs and produced nearly \$93 billion in new economic activity nationwide – or \$2.46 of economic activity for every \$1 of research funding. Moreover, as the world's premier public funder of medical research, the NIH plays an important role in our nation's international leadership, drawing top-tier talent from across the world to benefit the health and wellbeing of American communities and patients.

Even with the longstanding bipartisan support for the groundbreaking research supported by NIH, the agency is only able to fund approximately 1 in every 5 promising proposals, leaving potentially lifesaving science on the table, a challenge that is compounded when funding does

not keep pace with inflation. In November 2024, over 400 organizations across the NIH stakeholder community recommended at least the Senate Appropriations Committee approved-level of \$48.9 billion for NIH in FY 2025. This investment would help expand the potential for new cures and other interventions for patients and their families, fully capitalize on scientific opportunity, and ensure that NIH remains the global leader in medical research. Underinvestment in research supporting cures and treatments for patients not only harms the health of Americans, but also weakens our international leadership and status as a premier destination for global research talent.

Our community is grateful for the longstanding bipartisan and bicameral commitment to ensure that investment in NIH remains a national priority. We look forward to working together in the 119th Congress and thank you again for your leadership and prioritization of the work that brings hope to patients and their families.

Sincerely,

5p- Society
